(54) Improved capacitor for an implantable cardiac defibrillator

(57) A capacitor (28) having a housing (32) defining a chamber (34), and having at least two internal alignment elements (40, 41) in the chamber (34). A plurality of capacitor layers (48), each having alignment holes (44) formed therein to precisely fit the housing's alignment elements (40, 41), is positioned within the chamber (34), with the alignment holes (44) mating with the alignment elements (40, 41). The housing (32) may be electrically conductive and used to connect some

capacitor elements, in which case the alignment elements (40, 41) include non conductive spacers (42) that contact the alignment holes (44) of the sheets (48). The housing (32) may also include external index elements (88) for precisely positioning the housing (32) in registration with fixtures used for manufacturing processes requiring precise alignment.
